

Prepared for

Eclipse Hackathon

The Issue

Target:

An early warning system, and a safety evidence factory around it.

The Solution

FEV

Idea:

Use Open source acceleration to bring stable/Safe realization fast to market

The Eclipse SDV projects equip us with a lot of off the shelf capabilities.

Plan:

- Brainstorm an architecture.
- Breakdown goals into backlogs.
- Have a working prototype available and the published a reference as Blueprint.

The Team

Alexander (Planning)

Git – MoedderAlex
Simulation, Network
Communication, DevOps

Sinan (Hacker)

Git – CidemSinan
Embedded, Ankaïos
AUTOSAR

Michael (Hacker)

Git – FEVLuM
In-Vehicle Networks,
Diagnostics, Embedded

Ashwin (Hacker)

Git – Kadayil
Embedded, HPC,
Architecture

Irem (Hacker)

Git – isik-i
VCU-Integration,
AUTOSAR, DevOps

The Product

Reference
Architecture:
Fault to
reporting(using
Eclipse SDV Open
tech)

Distributed
computing &
deployment

Blueprint Initiated

System architecture · from sensor to safety evidence

The Competition

Diagnostics
Vendors

dSpace /
Vector

Electronics
Manufacturers

LG/
Bosch

FEV

Our Advantage

Open Source :

No license fees and supplier lock in effect

Distributed Test Bench over the Cloud :

The individual components deployed in separate HPC's and Test HW

End to End :

From fault event to Tester Dashboard/Test Reports : Sensors to Evidence

Easily Extendable :

Plug and switch of individual components and easy extentionability with capabilities like KUKSA, openDuT.. etc.

Deployable for testbenches and in car monitoring

FEV

Open Source

- ★ **Huge knowledge pool and support**
- ★ **Better steering: powered by ownership. (no supplier dependency)**
- ★ **Large community : leading to faster bug fixes and enhancements as well as business business collaboration**
- ★ **Better AI acceleration**

Closed Source

FEV

- **Knowledge is closed**
- **Project bottlenecks due to closed source bugs and supplier timelines**
- **Narrow competences**
- **Vendor specific AI support**

Business Model

Business Value

Required Resources

Internal Project Showcase Level

Display of SDV technology capabilities

- **Showcases** at conferences
- Marketing posts
- Leading to further collaborations and **acquisitions**.

- 2 People
- 6 Months

Full Product

- The Reference blueprint of End to End implementation/deployment of Doctor Whodunit.
- **Customers:** OEMs and other Engineering service providers.
- **Revenue:** Setting up, architecture and deployment models for the customer who can eventually co-own the open source implementation.

- Full developer team
- Help from legal (contracts etc.)
- Maintenance plan
